EDUCATION

Johns Hopkins University

Expected May 2029

B.S. Applied Mathematics & Statistics, B.A. Economics | GPA: 3.70/4.00

Baltimore, MD

- **Coursework:** Gateway Computing: Java (OOP), Data Structures, Linear Algebra for Data Science. **Honors:** Hodson Trust Scholar (from 45,000+ applicants), 1For2 Foundation Scholar (5 of 1,000+); \$300K in scholarships

EXPERIENCE

Summer Atlantic Capital LLC & SAC Nexus

Jun 2026 – Present

Software Engineer, Product Development Team

Remote

- Shipped a production detection service as a **versioned FastAPI microservice**, owning the API contract, versioning strategy, and backward compatibility for downstream consumers
- Built an **event-ingestion pipeline** for high-volume streaming data with schema validation and error handling, and implemented a ranking layer that cut manual review load by surfacing highest-severity cases first
- Scaffolded the **repository and CI pipeline** from scratch (automated tests, linting, build gates) and instrumented **monitoring and logging** to make production failures traceable

Open Health Intelligence (ClarityAtlas)

Sep 2025 – Present

Co-Founder & Technical Lead

Baltimore, MD

- Architected and shipped a **full-stack iOS application end to end** (Swift, SwiftUI; Supabase/PostgreSQL backend), deployed to real users in a live pilot at Johns Hopkins and earning a **non-binding \$75K investment indication**
- Owned the **entire backend design solo**: relational schema for longitudinal per-user data, **serverless functions** on Supabase Edge, a geofenced event-trigger system, and a similarity-matching service
- Integrated device sensor APIs (HealthKit) with **background data collection**, handling intermittent connectivity, batching, and user consent requirements

SnapSort

Jan 2024 – Aug 2025

Founder & Sole Engineer

Phoenix, AZ

- Scaled a web application from zero to **300+ users** by designing a **multi-service API pipeline** (Flask backend, AWS) that orchestrated several third-party services behind a single request path
- Raised **\$5K in non-dilutive funding** and led a team of 4, running code review across all contributors

Intelehealth

Sep 2025 – Jun 2026

Software Engineering Intern

Hybrid (Baltimore & India)

- Built a Python **data pipeline** integrating multiple third-party APIs (geospatial distance across **32 sites**, weather services) with input validation and failure handling; designed a stratified validation framework benchmarking outputs against a **4,169-case** gold standard

PROJECTS

tSearch — Talent Discovery Engine | TypeScript, Node, Neo4j, Express

2026

- Shipped a working MVP in **4 days** for a problem scoped by the founder of Z Fellows; iterated through 2 rounds of feedback into an introduction to his team, with the pipeline assessing **9 candidates** and surfacing **8** into a ranked digest
- Designed a **multi-stage pipeline** (identity resolution → graph expansion → scoring → digest) with stages isolated so downstream scoring never mutates upstream state; modeled a **Neo4j graph schema** over people, repositories, and collaborations and integrated the GitHub API with rate-limit handling

Gloria — AI Memory Companion | React, TypeScript, Python, Flask, PostgreSQL

2025

- Built a **full-stack application end to end** serving 3 distinct user roles: React/TypeScript SPA, Flask **REST API**, PostgreSQL relational store, and a Neo4j graph, with **role-based authentication (JWT)** and permission gating between roles
- Eliminated duplicate-record bugs caused by **race conditions** in concurrent writes by implementing **idempotent queries and serialized transactions**

TECHNICAL SKILLS

Languages: Python, TypeScript/JavaScript, Java, C/C++, SQL, Swift, R

Backend & Systems: REST API design, microservices, state machines, event-driven pipelines, concurrency, authentication, Node, Express, Flask, FastAPI

Databases & Frontend: PostgreSQL, SQLite, Neo4j, Supabase (schema design, indexing, idempotency); React, Vite, SwiftUI

Developer Tools: Git/GitHub (branching, pull requests, code review), CI pipelines, automated testing, monitoring & logging, AWS, Google Cloud
